

Nathan Ivor Sequeira

Date of birth: 02/12/2003 | **Nationality:** Indian | **Gender:** Male | **Email address:** nathansequeirade@gmail.com |
Website: <https://nathansequeirafinal.vercel.app/> | **Address:** India (Home)

● ABOUT ME

BCA graduate with 1.5 years of professional experience in DNS, VPS, and VPN infrastructure support. Independent project work spans distributed systems, real-time data pipelines, and ML-based observability. Seeking to formalise and deepen that foundation through the ASEDS programme at HS Heilbronn.

● EDUCATION AND TRAINING

19/10/2021 – 22/05/2024 Mangaluru, India

BACHELOR OF COMPUTER APPLICATION St. Aloysius College (Autonomous)

Studied core areas including Data Structures, Algorithms, OOP (Java, C, C++), Database Systems, Operating Systems, Computer Networks, AI & Machine Learning, Software Engineering, and Mathematics (Linear Algebra, Probability, Statistics).

Final grade CGPA: 6.84/10 — German equivalent: 2.5 | **Level in EQF** EQF level 6

● WORK EXPERIENCE

JUNIOR SUPPORT ENGINEER - BLUEHOST - UNIFYCX – 04/07/2024 – 19/03/2025 – MANGALURU, INDIA

- Diagnosed and resolved DNS propagation failures, email delivery breakdowns, and SSL certificate issues across shared and VPS hosting infrastructure.
- Used Grafana dashboards and WHM/cPanel tooling daily to correlate server-side symptoms with client-reported failures.

JUNIOR ASSOCIATE - OPERATIONS - TECHNICAL SUPPORT - UNIFYCX – 20/03/2025 – 04/11/2025 – MANGALURU, INDIA

- Designated QA tester for the team: designed test cases, documented failure modes, and validated fixes before release, commended by management for technical rigour and self-driven ownership.
- Managed high-volume VPN support queue (40-80 tickets/shift), resolving authentication failures, tunnel configuration errors, and server load imbalances using Zendesk.

● SKILLS

Programming Languages

JAVA | SQL | JavaScript | Python | C and C++

Infrastructure

cPanel | Docker | VPS | WHM | DNS | Linux

ML & Data

NVIDIA NIM | Google Gemini Pro | scikit-learn | OpenAI API

Frameworks

ReactJS | Next.js | LangChain | Tailwind CSS | FastAPI

Databases

SQLite | PostgreSQL | MySQL | Pinecone

DevOps / CI

Git | GitHub | GitHub Actions

Observability

Prometheus | Grafana

Security

HMAC-SHA256 | Palo Alto Networks

● PROJECTS

InfraBoard — Cloud-Native Microservices Observability Dashboard (FastAPI, Prometheus, Grafana, Docker)

- Built a three-microservice observability system where Prometheus scrapes metrics every 15 s, Grafana visualises them, and an unsupervised Isolation Forest model detects anomalies and persists alerts to SQLite — directly motivated by the monitoring work at Bluehost.
- Chose Docker Compose over Kubernetes deliberately for single-developer scope, with migration path and rationale
- GitHub: <https://github.com/Nathan-sudo-pycharm/infraboard-observability>

CodeReviewBot — AI-Powered GitHub PR Reviewer (FastAPI, Celery, Redis, Mistral, Next.js)

- Event-driven async system that picks up GitHub webhook events, queues diff analysis via Celery/Redis, and posts severity-ranked AI review comments directly to Pull Requests with HMAC-SHA256 webhook verification.
- GitHub Link: <https://github.com/Nathan-sudo-pycharm/codereviewbot>

CURRENT

Hermes — Distributed Workflow Orchestration Platform (Python, Message Queue, PostgreSQL)

- Designing a self-hosted workflow orchestration system focused on fault tolerance: worker isolation to prevent cascading failures, configurable retry logic, and a dead-letter store so failed workflows are never silently lost.
- GitHub Link: <https://github.com/Nathan-sudo-pycharm/hermes>

● CERTIFICATIONS

Honeywell & Palo Alto Networks, 31/10/2023

Honeywell Cybersecurity Training (Grade A)

Completed certification covering cybersecurity fundamentals, firewall operations, and cyber attack prevention strategies. Training delivered by Honeywell and Palo Alto Networks at St. Aloysius College.

Palo Alto Networks, 31/10/2023

Cloud Security Fundamentals — Palo Alto Networks

Completed foundational training in cloud security principles, covering threat detection, network security, and cloud infrastructure protection.

Additional Achievements

Won multiple inter-collegiate IT product demonstration and showcase competitions, pitching original technical projects to panels across St. Aloysius College, St. Joseph's Engineering College, and Rosary College of Commerce and Arts. Additional recognitions include Certificate of Excellence, Certificate of Appreciation, and Hackathon Participation at St. Aloysius College.
